

Therapy Connections

Visual Oculomotor

Visual oculomotor is rapid, precise, and accurate control of eye muscles. It includes the ability to accurately localize a target, maintain stationary gaze, smoothly track a moving target, and quickly/accurately shift gaze with eyes independent of head movement.

When 20/20 vision is not enough

Therapy Connections will provide a wide range of therapeutic services using state of the art techniques that allow children with disabilities to achieve their highest potential

Services are provided to children of all ages and various diagnoses that include Cerebral Palsy, Sensory Processing Disorder, Autism, Dyspraxia, Down syndrome and Language and Development Delays

2498 Dayton-Xenia Rd.
Beavercreek, Ohio 45434
Phone: 937-427-1919

Implications

- ❏ Rereading or skipping lines
- ❏ Poor comprehension in reading
- ❏ Difficulty discerning where one word stops and another starts
- ❏ Accurately copying work from the board to one's paper
- ❏ Difficulty with sports such as throwing, catching, hitting, and kicking
- ❏ Processing problems can occur even with 20/20 vision

How Therapy Connections Helps

- ❏ Sensory approach using swings and whole body movement during fun, interactive play
- ❏ Protocols that improve involuntary and voluntary movement of the eyes such as Astronaut Training
- ❏ Identify underlying retained primitive reflexes that also impact the functioning of the visual system
- ❏ Integrated Listening System that improves neurological functioning affecting the sensory motor system
